

RUBADARSHINI L

Python Developer | Automation | CI/CD | Azure Cloud | Generative AI | AI Agents

 rubaloganathan6@gmail.com  9361213607  LinkedIn  Bangalore, India

 Portfolio site

Profile Summary

Software Engineer with 1.8+ years of experience in Python development, automation, and CI/CD-driven application delivery. Skilled in building automation workflows, backend services using Flask, and deployment pipelines using GitHub Actions and Azure DevOps. Hands-on experience with Azure cloud services, Docker, Bash scripting, application deployment, monitoring, and operational support. Complemented by personal projects in Generative AI, including RAG pipelines, multi-agent systems, and AI-powered automation workflows. Comfortable working in Agile environments and collaborating with cross-functional teams to deliver reliable software solutions.

Technical Skills

Programming & Backend Development: Python | Flask | JSON | Bash Scripting

Automation & CI/CD: GitHub Actions | Azure DevOps | CI/CD Pipeline Design | Workflow Automation

Cloud & Infrastructure: Azure (Virtual Machines, Blob Storage, Key Vault, cost management) | Docker

Monitoring & Observability: Grafana, Loki, Promtail

Artificial Intelligence & Machine Learning: Generative AI | LangChain | CrewAI | Retrieval-Augmented Generation (RAG) | ChromaDB | Hugging Face | Machine Learning | AutoML | Prompt Engineering | Pandas | Scikit-learn

Professional Experience

Software Engineer Dec 2024 – Present | Bangalore, India
Nextbrain Technologies

- Built **scalable Python applications** using **Object-Oriented Programming (OOP)**, creating reusable modules that **reduced code duplication by ~40%** across projects.
- Automated operational workflows using **Python and Bash**, reducing manual effort by **~70%** and improving process consistency and reliability.
- Designed and maintained **CI/CD pipelines** using **Azure DevOps and GitHub Actions**, improving deployment success rate and enabling faster, repeatable, zero-downtime releases across environments.
- Provisioned and hardened **Azure infrastructure (VMs, Blob Storage, Key Vault)** to support production workloads with secure and scalable configurations.
- Implemented centralized secrets management via Azure Key Vault, eliminating hardcoded credentials and reducing credential-exposure risk across all services.
- Assisted in server maintenance and monitoring, including log analysis, uptime checks, and process management.
- **Worked with APIs and structured data formats**, handling JSON responses and integrating automated data flows into internal systems.

- Developed an internal monitoring **dashboard using Flask as the backend with HTML and CSS for the frontend**, exposing REST APIs to read trading and operational data from JSON files and dynamically populate real-time dashboard views for monitoring and decision-making.
- Implemented centralized logging and monitoring stack (**Grafana, Loki, Promtail**), reducing debugging time and enabling quicker root-cause analysis during production issues.

Intern

Jan 2024 – Jun 2024 | Chennai, India

TATA ELXSI

- Developed and deployed a web application for internal operations, reducing manual processing time by 30%.
- Automated data cleaning and analysis using **Pandas**, processing raw Excel files into structured insights that improved efficiency by 60%.

Projects

Automated Algorithmic Trading

Technologies: Python, Azure Cloud, GitHub Actions, API, Trading Automation

- Built and maintained Python-based algorithmic trading systems by designing, coding, and refining multiple trading strategies for intraday execution.
- Designed and developed a production-grade automated algorithmic trading platform, enabling end-to-end trade lifecycle automation with minimal manual intervention.
- Built CI/CD-driven trading operations using GitHub Actions and Microsoft Azure Virtual Machines for automated deployment, scheduling, execution, and monitoring of trading scripts.
- Analyzed market data, logs, and dashboards to optimize strategies and improve operational stability.

RAG-Based Document Chatbot

Technologies: Python, LangChain, ChromaDB, Hugging Face, LLMs, Docker, Kubernetes

- Built a production-ready RAG chatbot pipeline covering document ingestion, chunking, HuggingFace sentence-transformer embeddings, and ChromaDB vector indexing for semantic retrieval and context-aware response generation.
- Designed and implemented a CI/CD pipeline using GitHub Actions, Docker, and Kubernetes to automate deployment, ensure consistent runtime environments, and enable scalable, reliable application delivery.
- Evaluated and optimized LLM responses using metrics such as answer relevance, faithfulness, and context precision, reducing hallucinations and improving retrieval quality in RAG-based outputs.

Agentic AI Assistant (CrewAI)

Technologies: Python, CrewAI, LLMs, LangChain

- Developed a multi-agent AI assistant using CrewAI and LangChain where specialized agents handled task planning, execution, enabling autonomous workflow orchestration.
- Implemented inter-agent tool-based communication for coordinated task handoff, improving task completion accuracy and interpretability of agent decision chains.

Education

Bachelor of Engineering(Electronics and Communication)

Oct 2020 – Mar 2024 | Chennai, India

R.M.K.Engineering College

CGPA: 9.15/10
