 Portfolio site

Profile Summary

DevOps-focused Software Engineer with 1.7+ years of experience designing CI/CD pipelines, provisioning Azure cloud infrastructure, and automating operational workflows. Reduced manual effort by ~70% through Python/Bash automation. Hands-on with Docker, Azure DevOps, GitHub Actions, Grafana, and Loki. Complemented by applied AI/ML project experience including RAG pipelines and multi-agent systems. Comfortable working in Agile/Scrum environments with cross-functional teams.

Technical Skills

DevOps & CI/CD: Azure DevOps, Github Actions, CI/CD Pipeline Design, Docker, Kubernetes, Terraform

Cloud Platforms & Services: Microsoft Azure, Azure Virtual Machines, Azure Blob Storage, Azure Key Vault

Monitoring & Observability: Grafana, Loki, Promtail

Languages & Scripting: Python, Bash, JSON, Flask, REST APIs

Artificial Intelligence & Machine Learning: LLMs, RAG(LangChain, Hugging Face, chromaDB), CrewAI, Multi-Agent AI Architectures, Machine Learning, AutoML, Prompt Engineering, Scikit-learn, Pandas

Databases & Version Control: PostgreSQL, Git, Github

Professional Experience

Software Engineer

Dec 2024 – Present

Nextbrain Technologies

Bangalore, India

- Designed and maintained **CI/CD pipelines** using **Azure DevOps and GitHub Actions**, improving deployment success rate and enabling faster, repeatable, zero-downtime releases across environments.
- Delivered **scalable Python applications** using **Object-Oriented Programming (OOP)**, creating reusable modules that **reduced code duplication by ~40%** across projects.
- Automated operational workflows using **Python and Bash**, reducing manual effort by **~70%** and improving process consistency and reliability.
- Provisioned and hardened **Azure infrastructure (VMs, Blob Storage, Key Vault)** to support production workloads with secure and scalable configurations.
- Implemented centralized secrets management via Azure Key Vault, eliminating hardcoded credentials and reducing credential-exposure risk across all services.
- **Worked with APIs and structured data formats**, handling JSON responses and integrating automated data flows into internal systems.

- Implemented IaC using Terraform and leveraged Docker and Kubernetes to provision, deploy, and manage containerized applications and cloud resources, ensuring consistent, scalable, and reliable environments.
- **Built a dynamic monitoring dashboard** using Flask (backend) and HTML and CSS(frontend) to visualize and populate real-time data from JSON files via REST endpoints, improving data visibility and decision-making.
- Implemented centralized logging and monitoring stack (**Grafana, Loki, Promtail**), reducing debugging time and enabling quicker root-cause analysis during production issues.
- Collaborated with developers and QA teams to resolve deployment and environment issues,improving release stability and minimizing downtime.
- Supported DevOps practices in an **Agile Scrum framework**, enabling continuous delivery through close collaboration during sprint planning, backlog grooming, and release reviews.

Intern

Jan 2024 – Jun 2024

TATA ELXSI

Chennai, India

- Developed and deployed a web application for internal operations, reducing manual processing time by 30%.
- Automated data cleaning and analysis using **Pandas**, processing raw Excel files into structured insights that improved efficiency by 60%.

Projects

Automated Algorithmic Trading

Technologies: Python, DevOps

- Built and maintained Python-based algorithmic trading systems by designing, coding, and refining multiple trading strategies for intraday execution.
- Built CI/CD-driven trading operations using GitHub Actions and Microsoft Azure Virtual Machines for automated deployment, scheduling, execution, and monitoring of trading scripts.
- Analyzed market data, logs, and dashboards to optimize strategies and improve operational stability.

RAG-Based Document Chatbot

Technologies: Python, LangChain, ChromaDB, Hugging Face, LLMs, Docker, Kubernetes

- Built a production-ready RAG chatbot pipeline covering document ingestion, chunking, HuggingFace sentence-transformer embeddings, and ChromaDB vector indexing for semantic retrieval and context-aware response generation.
- Designed and implemented a CI/CD pipeline using GitHub Actions, Docker, and Kubernetes to automate deployment, ensure consistent runtime environments, and enable scalable, reliable application delivery.
- Evaluated and optimized LLM responses using metrics such as answer relevance, faithfulness, and context precision, reducing hallucinations and improving retrieval quality in RAG-based outputs.

Agentic AI Assistant (CrewAI)

Technologies: Python, CrewAI, LLMs, LangChain

- Developed a multi-agent AI assistant using CrewAI and LangChain where specialized agents handled task planning, execution, enabling autonomous workflow orchestration.
- Implemented inter-agent tool-based communication for coordinated task handoff, improving task completion accuracy and interpretability of agent decision chains.

Education

Bachelor of Engineering(Electronics and Communication)

Oct 2020 – Mar 2024

R.M.K.Engineering College

Chennai, India

CGPA: 9.15/10
